

Title: Is there a "wave management simulator" tool or something of the sort?

Score:

--- POST CONTENT ---

So just as a preface, I know the basics of wave management: fast push, slow push, freeze, etc. But it would be really cool if there's some more hands on approach to recreating scenarios in specific settings. So for example, let's say there's 3 range minions just outside my turret range, we all know my wave is going to slowpush back but the question is, is there a material difference if I say, fast clear 1 minion (last hit the 2), vs 2 minions (only last hit 1 minion), vs all 3 minions, etc. This is just one really specific example but I'd be really curious on how to optimize the waves in various states.

The only way I can think of is going on practice tool and either wait for certain wave scenarios to play out or perhaps even have someone on the other side help manipulate the waves.

Practice tool

Custom game + friend

League has notoriously dogshit tools for training sorry

One tip for practice tool that is not immediately apparent is to use the dummies for wave management practice.

You can put down an Emmy dummy, your minions will agro it for a few hits, and then you can remove it. In the time they were hitting the dummy, the enemy minions will get a push. Keep the dummy down longer to simulate a stronger push toward you.

This makes it a bit easier to force a push one way or another.

Also, you can set up 3 dummies behind your turret and your minions will stop and agro them. They will all pile up the wave after wave letting the enemy minions come right up to your turret so that you can practice CSing under turret.

Combine this and you could set up 3 dummies behind turret to block pause your first wave.

Set up 1 ally dummy in the middle of the lane to stop the enemy wave.

Kill all 3 melee minions. Then keyboard shortcut delete the dummies.

This will unleash 3 casters and on your side of the lane and you can run your experiment.

You can play with positioning the dummies so that the waves meet where you want them too (under turret, just outside of turret range, middle, etc.)

It's not awesome, but I found this to allow me to try out a lot of different things without having to have a friend help.

Yes, you can train that here

<https://loldodgegame.com/farming/>

it's not most accurate simulation, but atleast something

[Comment 4 | Score: 6]

You have your answers unfortunately.

Only other thing is to watch more games

[Comment 5 | Score: 5]

honestly with how dogshit your real options are (as others have stated) you're probably better off watching some in-depth guides, maybe taking notes, and just practicing in live games. that's what i used to do and it was better than anything i was able to pull off otherwise.
