

Title: An explanation about how much gold a level advantage is worth, and the importance of wave management and XP sources.

Score:

--- POST CONTENT ---

Vandiril just made [this really interesting breakdown](<https://www.youtube.com/watch?v=8m8J1s4nTgA>) about the gold value of base stats, and how he calculated what each value would be worth. There is a bit of exposition and set up, but the average gold value of the base stats for each champion he looked at are displayed after 8:40.

​

What this helps to highlight, and what is important for players to learn and respect, is that a level advantage can turn into a big lead not just because of power-spikes, or the base stats of leveling up abilities, but on the base stats of the champs themselves. This is especially true since most base stats affected by level growth are also primary combat stats (AD, HP, mana, attack speed, etc).

​

In his video Vandiril says that the average gold value of one level on Ashe is worth about 579 gold, this is as much gold as more than 4.5 waves, or 26 cs, in the early levels, and is roughly 3-4 waves worth of gold after 20 minutes. Also this is the gold value if they received a 3 kill shutdown and were able to *immediately* spend that 600 gold on more stats.

​

This is useful to keep in mind when planning a trade or all-in during a laning phase, if you're both

sitting at 400 hp and you know you have a good chance of winning a fight, but they level up, it's worth reconsidering even if its not a power-spike like level 6, whether you can also get through and survive the additional base stats.

also in addition to stats levels give a rank in an ability/new ability as well, worth noting

[Comment 2 | Score: 47]

I've been thinking about this a lot recently. It's not exactly that simple.

The HP makes a difference. Often, the AD does too in these lanes.

Does the attack speed make a difference when you only get one auto off in a trade? Not at all, it's wasted gold. It's disingenuous to act like those stats are universally gold efficient ya know? Important to keep in mind but not everyone actually benefits equally. When differently scaling levels for abilities factor in, it's another thing altogether. There are too many variables at play

[Comment 3 | Score: 10]

It's important to remember that stats aren't linear anymore for that reason. Going from level 1-2 on ashe is worth like 385 gold now, and going from 17-18 is worth 685 gold.

[Comment 4 | Score: 4]

wait... this means that if level up is worth "x" gold... champion base stats are worth gold too and runes too

this leads to a conclusion that we can be "y" gold behind since beginning in certain matchups
