

Title: In-Depth Wave Management Guide by Mobalytics

Score:

--- POST CONTENT ---

Hey Guys. My Name's PicklePants and I'm a former Diamond 1 Support main on the EUW server.

For the past few weeks, I've been working on an in-depth wave management guide that is updated for the new season with all of the related information in one place and in one guide. There are many really good wave management guides out there already by the community and I wanted to chip in.

My goal when starting this project was to create the most complete Wave management guide out there to date and include lots of information so players didn't miss out on information that is crucial to learning the subject.

As wave management is incredibly important for every role and everyone to learn, I wanted to make this guide understandable for all skill levels and I hope that we achieved that.

If you're interested in learning about how to manage waves the correct way with all the relevant information in one place, [check out our Mobalytics Wave Management Guide.](<https://mobalytics.gg/blog/league-of-legends-guide-everything-you-need-to-know-wave-management/>)

If you have any direct questions about Wave management, have any feedback or have any suggestions/ guide ideas- feel free to comment and I'll reply!

I expected some recycled information, that's way to long to be recycled.

I think riot announced that point and click spells now trigger minion aggro?

Love what this group does.

So in section how to slow push: kill caster minions and roam... But below in the image it is said that - leave caster minions and roam.

Is it a trap for those who only looked at images and didn't read or...

Didn't read whole thing but section about minions were interesting. Newer knew that minions become stronger if you have level advantage or turret advantage.
